

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A liquid crystal display device comprising:

a substrate;

thin film transistors formed on said substrate;

an insulation film defining first and second regions to cover said thin film transistors,
said first and second regions of said insulation film being different in thickness from each other;

a transparent electrode film formed on said first region;

a reflective electrode film formed on said second region; and

a light shielding film provided at portions underneath boundaries of said first and second regions and extended from the boundaries through a predetermined part of said second region.

Claim 2 (Canceled).

Claim 3 (Currently Amended): The liquid crystal display device according to Claim 1 or 2, wherein said light shielding film is made of the same material as said thin film transistors.

Claims 4-6 (Canceled).

Claim 7 (New): A liquid crystal display device comprising:

a substrate;

an insulation film defining first and second regions to cover said thin film transistors, said first and second regions of said insulation film being different in thickness from each other;

a transparent electrode film formed on said first region;

a reflective electrode film formed on said second region; and

a light shielding film provided at portions underneath boundaries of said first and second regions and extended from the boundaries through a predetermined part of said second region to prevent stray light from exposing said second region in manufacturing the liquid crystal display device.

Claim 8 (New): The liquid crystal display device according to Claim 7, wherein said light shielding film is made of the same material as said thin film transistors.
